(54) Title: ANTIGENIC FUSIONPROTEIN CARRYING GAL $\alpha$ 1,3GAL EPI TOPES

## (57) Abstract

The present invention relates to an antigenic fusionprotein, which carries multiple Gal $\alpha$ 1,3Gal epitopes. The fusion protein according to the invention may also be comprised of a heavily glycosylated mucin part, which mediates binding to selectins, such as PSGL-1, and a part, which exhibits immunoglobulin properties, such as the Fc part of IgG. The fusionprotein according to the invention is preferably used as an absorber to prevent a hyperacute rejection of a xenotransplant, such as a pig tissue or organ transplanted into a human patient. In addition, the invention relates to a method for the prevention of a hyperacute rejection reaction in a patient who is to receive a xenotransplant.
